1. Introduction

Welcome to the OmniFish Customer Portal – your dedicated space for tracking support requests, accessing product documentation, and getting expert help from our team.

This guide walks you through everything you need to know to get started and make the most of our services.

2. Accessing the Portal

The Customer Portal is available at the following web addresses:

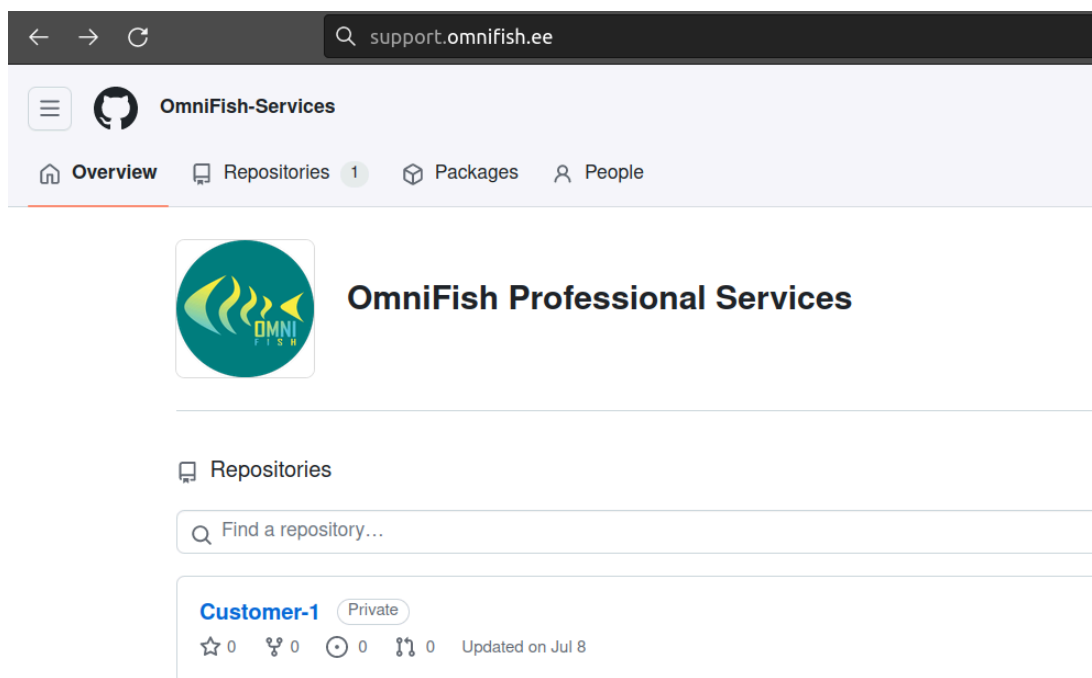

- support.omnifish.ee
- <https://github.com/OmniFish-Services>

Any of the above addresses will open the Customer Portal in a web browser.

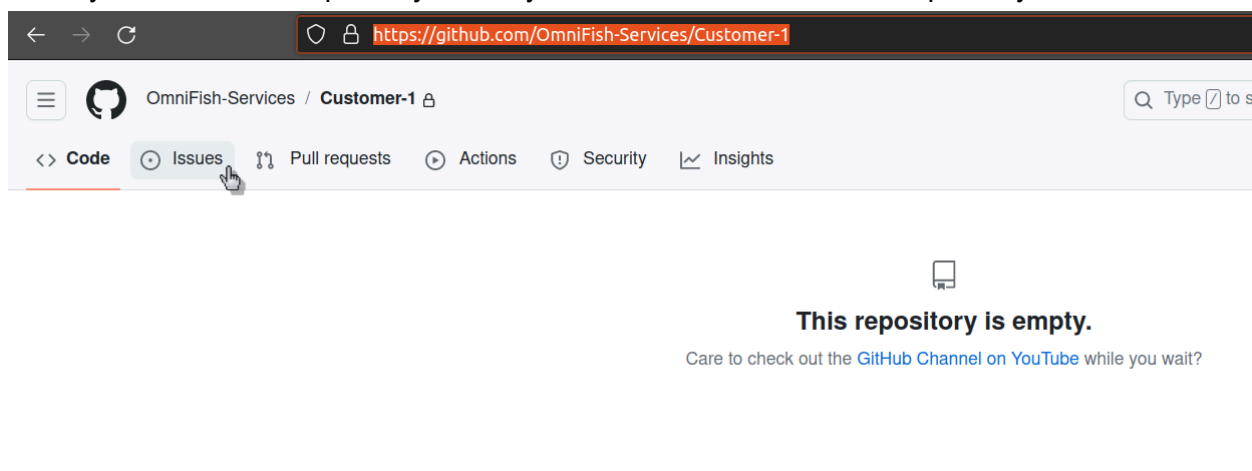

In order to have access to the Customer Portal, an OmniFish customer contact needs an account on [GitHub.com](https://github.com). Then, the contact needs to accept an invitation to access the Customer Portal sent out by a member of the OmniFish support team. Alternatively, the OmniFish team can create the accounts if names and emails of contacts are provided by the customer.

3. An overview of the OmniFish Customer Portal

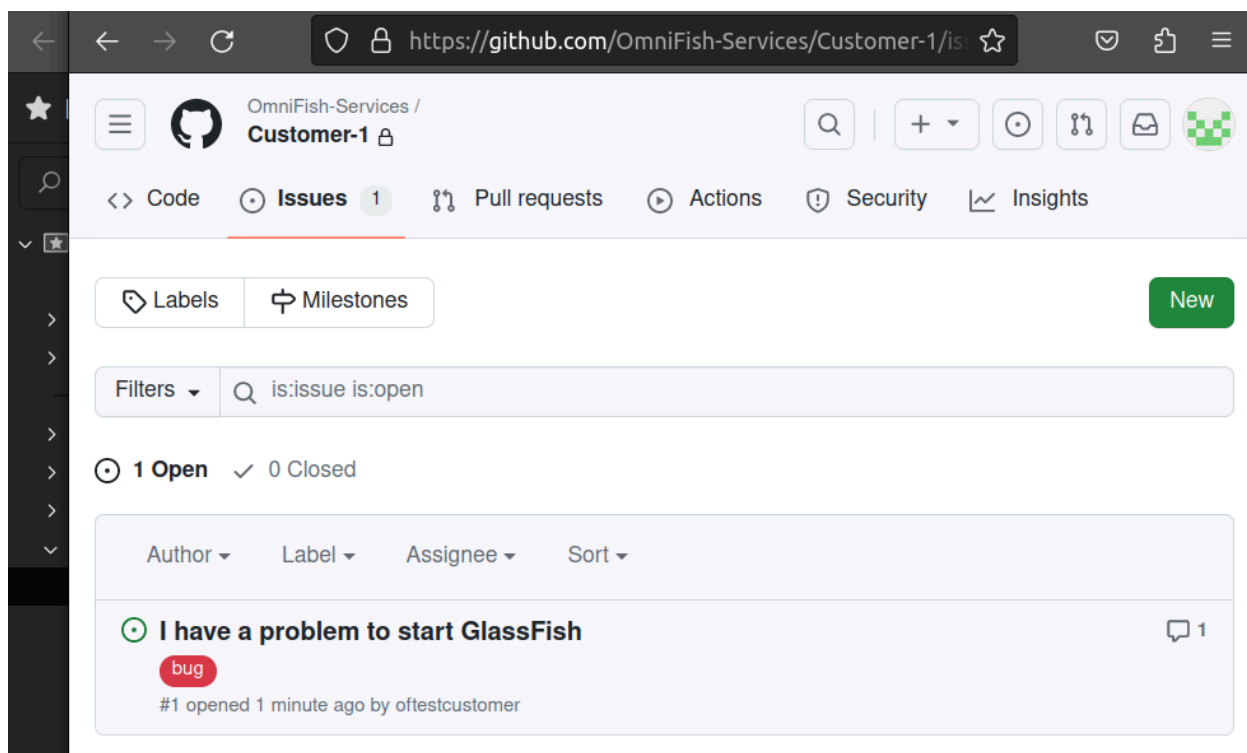

The Customer Portal is a private organization on GitHub.com. OmniFish customers have access to a single dedicated repository in this organization. The repository name contains the name of the customer's company. In the example below, the customer's name is **Customer-1**:

When you click on the repository name, you'll see an overview of the repository:

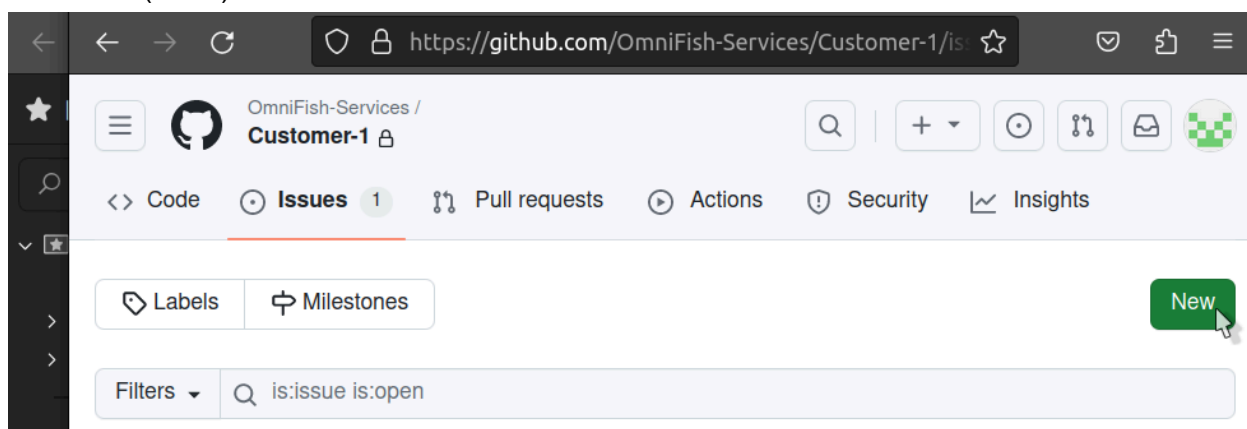

The repository is empty and is not meant to be used as a code repository. Instead, navigate to Issues tab, where you can raise new support issues (request) and work with your existing issues:

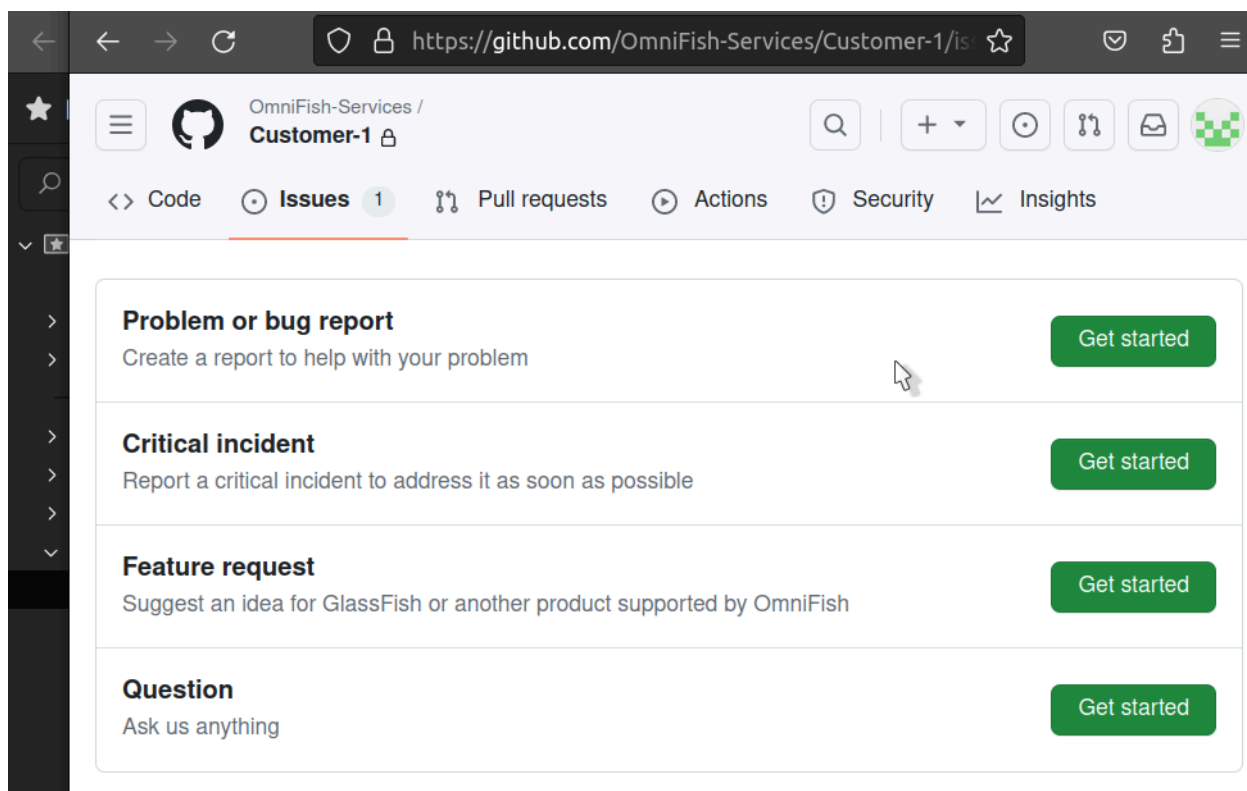

Here you can either click on one of the existing issues, e.g. “I have a problem to start GlassFish”, or create a new issue with the “New” button.

4. Creating a ticket

To raise a new support request, go to the “Issues” tab and click on the “New” button to create a new ticket (issue):

Then you can choose from one of the 4 options:

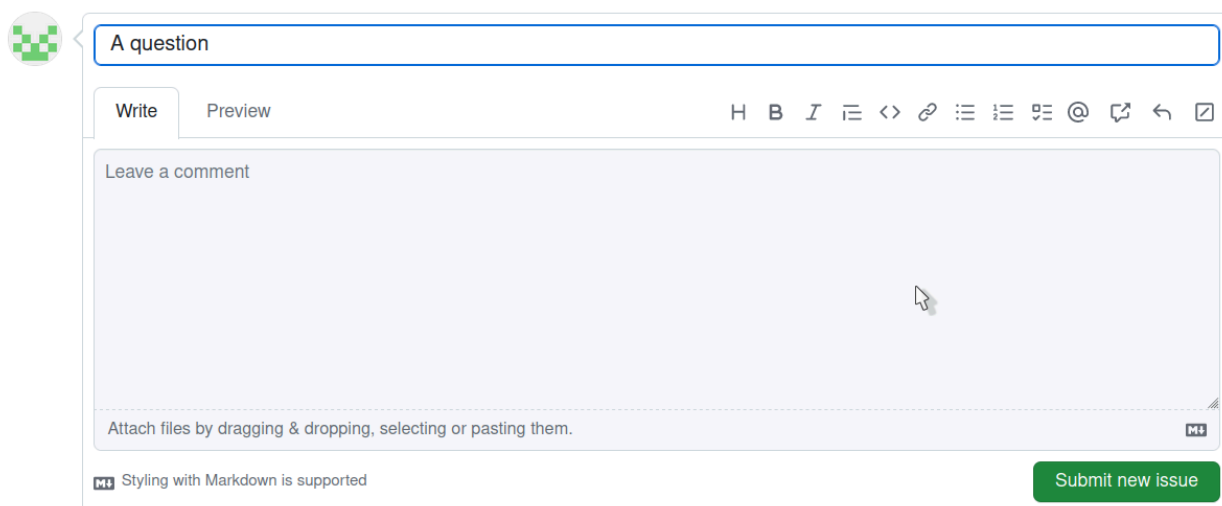

To raise an issue, click on the “Get started” for one of the options.

On the next page, fill in the details of your problem, description of a new feature, or a question about supported products or OmniFish services, and then click on the “Submit new issue” at the bottom:

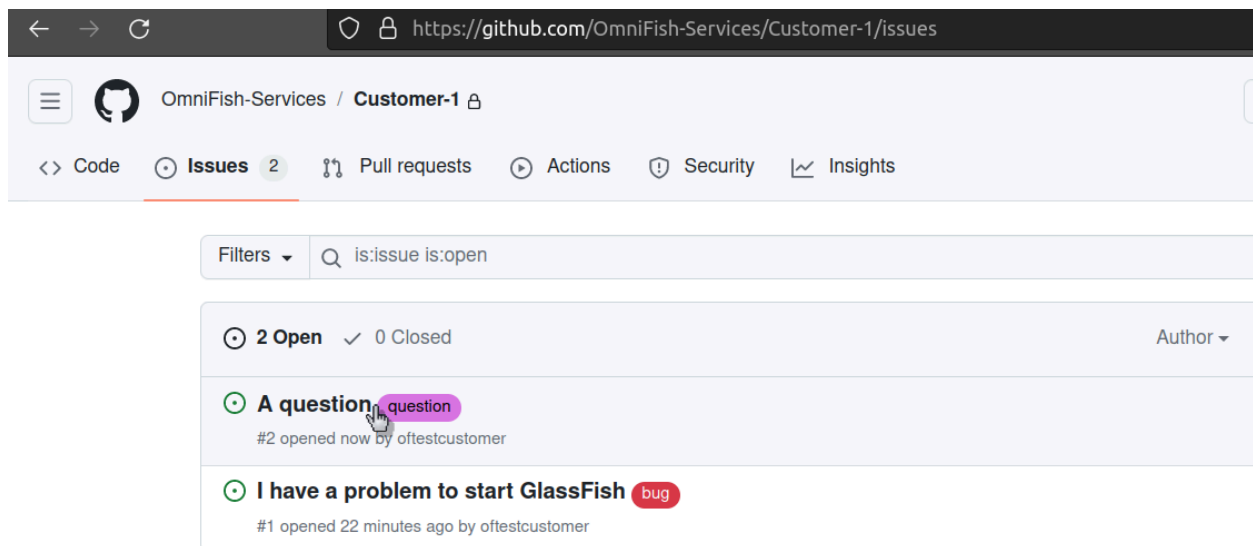

Issue: Question

Ask us anything. If this doesn't look right, [choose a different type](#).

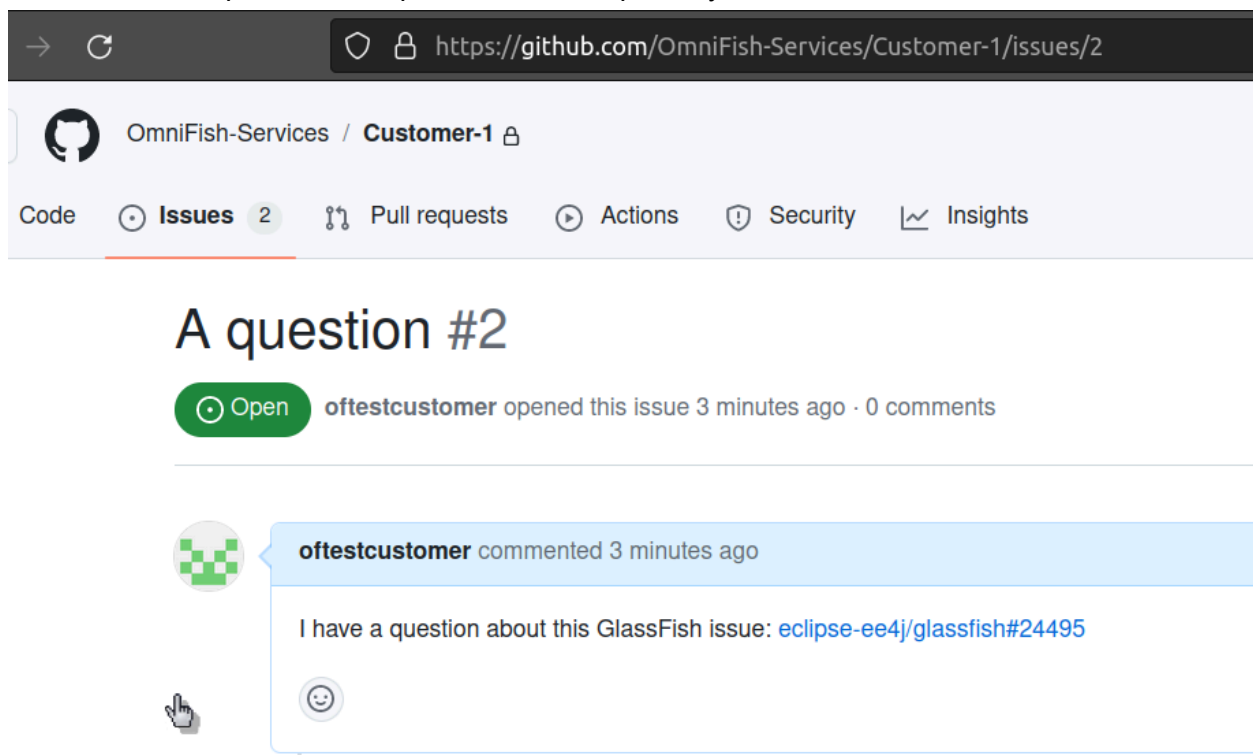

The screenshot shows the 'New Issue' form for the 'Question' type. The title field contains 'A question'. Below the title is a rich text editor with 'Write' and 'Preview' tabs. The 'Write' tab is active, showing a toolbar with various formatting options (H, B, I, etc.) and a large text area for the issue description. At the bottom, there is a 'Submit new issue' button and a note about Markdown support.

This will create a new issue in the list of issues. A member of the OmniFish support team will take it as soon as possible and will respond:

In your new or existing issue, you can link to other issues or pull requests in any repository on GitHub, for example in the Eclipse GlassFish repository:

This will also create a link on the external linked issue, which will be visible to you and the OmniFish support team, but it will be hidden from the public.

This is how it will look like for you:

This is how it will look like for public:

6/7

The screenshot shows a GitHub issue page with a dark theme. At the top, there is a green 'Open' button and the issue title 'Move the suntheme module from the Woodstock repository into the GlassFish ma'. Below the title, it says 'OndroMih opened this issue on Jul 8 · 1 comment'. The main content area has a heading 'Woodstock and suntheme aren't supposed to be used outside of GlassFish and it's simple Admin Console code.' followed by a section titled 'Impact of Issue'. This section lists: 'Type: cleanup task', 'Component: Admin Console', and 'Priority: low'. There is a thumbs up icon with the number '1' below the list. A comment by 'OndroMih' is shown, mentioning the issue and providing a link to a pull request: 'Move the suntheme module from the Woodstock repository into the G repository (was "Remove the community-theme module") #24435'. Another comment by 'arjantijms' is shown, stating 'I'd say go one step further and move JSFTemplating / Woodstock itself to GlassFish (inside...'. There is another thumbs up icon with the number '1' below this comment.

5. Best Practices

- Be clear and specific in your ticket descriptions.
- Attach logs, configuration files (or relevant snippets) or screenshots to speed up troubleshooting.
- Use correct ticket types to help us route issues efficiently.

6. Legal & Privacy

All communications and support data are handled in accordance with OmniFish's privacy policy. Your data is stored securely and used solely for support purposes.
